DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6, 22-23, 25-28, 31-34 and 36, drawn to an isolated polynucleotide, an endophyte having at least one of the genes of the lolitrem gene cluster disrupted other than by mutation (non-endogenously), a construct, and host cell, therewith; and a method of producing an indole diterpene, enzyme, intermediate or other chemical compound associated with the indole diterpene biosynthetic pathway using an *in vivo* expression system.

Group II, claim(s) 7-12, and 28 drawn to an isolated polypeptide and a method of catalyzing *in vitro*, the biosynthesis of an indole diterpene.

Group III, claim(s) 13-22, 29-31, and 35 drawn to primers, probes and methods of identifying mutations in a lolitrem gene cluster of an endophyte, and mutant plants thereof.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the technical feature of genes or enzymes involved in the lolitrem biosynthetic pathway is known in the art. Young C. et al. (2003) in Molecular 22nd Fubgal Genetics Conference, March 18-22, 2003; Asilomar, CA, USA: Poster #15 teaches the molecular cloning and genetic analysis of a symbiosis expressed gene cluster for lolitrem biosynthesis; notably the isolation of *ItmG* from *N. loli* encoding a geranylgeranyl diphosphate synthase (GGPPS) see abstract.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is further required to elect a single polynucleotide sequence or a single amino acid sequence upon election of Group I, II or III. This requirement is not to be construed as a requirement for an election of species, since each of the nucleic acid sequences or amino acid sequences is not a member of a single structurally and functionally related genus, but rather constitutes an independent and patentably distinct invention. Separate searches and considerations would be required for examination of each of the sequences.
